

## MONITORING SYSTEM «HeatCAM»

- Monitoring system «HeatCAM» provides:
  - monitoring of the performance of the heating network based on weather;
  - computation of the amount of heat energy;
  - formation of accounting documentation.
- The system «HeatCAM» provides:
  - an automated control of heat supply modes of the buildings;
  - reduction of the amount of heat consumption by 15 %.
- The system is implemented in the SSU and several public schools of Sumy.
